

# Operations & Asset Management

Make smart, strategic decisions about your fleet and operational resources.

## Our solutions

Our solutions are purpose-built to help companies manage their entire renewable portfolio from initial planning through end-of-life. We help you leverage all your data, make efficient decisions about resources and give you a full suite of tools to communicate and manage workload. All so you can deliver the most efficient energy generation in the world.

The results: industry-leading productivity, efficiency and returns.

Centralize, manage, configure and track all operations and maintenance work associated with wind turbine blades. Create records of all work done on your blades from their first operational days to end-of-life.

Knowing the record of a blade through its entire lifecycle is invaluable. Horizon Blade Management helps you understand all issues identified and work done to repair a blade over time. Having that information allows you to make smarter, more informed decisions using data from across your blade fleet that can result in millions of dollars in cost savings.

- Manage and track all blade inspections and repairs
- Review blade inspection and repair data from SkySpecs and third-party vendors
- Complete administrative planning, track budgets and spending and audit completed work
- Collaborate on work execution with internal and external stakeholders
- Create and share data visualizations and reporting across your organization

Centralize, manage, and track asset health to create a detailed ‘medical history record’ for your fleet. Capture your key O&M data: inspections, repairs, maintenance, etc., all in one organized place.

Create a foundation for reliable, efficient energy production and return-on-investment. Our Horizon Fleet Management solution gives you full control over your entire fleet of assets – whether they’re wind turbines, solar panels, or other key renewable infrastructure. Make smarter, more informed decisions using data from across your renewable energy portfolio.

- Manage and track all inspections, repairs, and maintenance tasks
- Upload repair, inspection, and other asset data from SkySpecs and third-party vendors
- Configure the software to your fleet requirements so you know the make, model, and history of every component
- Complete administrative planning, track budgets and spending, and audit completed work
- Collaborate on work execution with internal and external stakeholders
- Triage and address incoming alerts from field inspections, tests, diagnostic systems, etc.
